For an **entry-level Data Analyst**, don't just upload your Excel file. Present your project like a real business case study. Recruiters spend only **30–60 seconds** looking at a project, so make it easy to understand.

Recommended Portfolio Layout

1. Project Title

Coffee Sales Dashboard | Excel Data Analysis Project

---

2. Project Overview (2–3 sentences)

> This project analyzes coffee sales data using Microsoft Excel to identify sales trends, top-performing products, customer purchasing behavior, and regional performance. I built an interactive dashboard using Pivot Tables, Pivot Charts, Slicers, and Excel formulas to provide actionable business insights.

---

3. Business Problem

Instead of saying "I created a dashboard," explain why it matters.

Example:

> A coffee business wanted to understand which products, customers, and countries generated the highest revenue. The goal was to create an interactive dashboard that helps management monitor sales performance and make better business decisions.

---

4. Dataset

Include:

- Number of records (if known)
- Columns used (e.g., Date, Customer, Country, Coffee Type, Roast Type, Size, Quantity, Unit Price, Sales)
- Data source (real or sample dataset)

---

5. Tools Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- XLOOKUP
- INDEX & MATCH
- Conditional Formatting

---

6. Project Process

Explain your workflow.

1. Imported the dataset.
2. Cleaned and formatted the data.
3. Checked for missing or duplicate records.
4. Created Pivot Tables.
5. Built Pivot Charts.
6. Added Slicers for filtering.
7. Designed an interactive dashboard.
8. Analyzed the results and summarized key insights.

---

7. Dashboard Screenshot

Include one or two clear screenshots showing your completed dashboard.

---

8. Key Insights

List 4–6 findings from your analysis, such as:

- Highest-selling coffee product
- Best-performing country
- Top customer by sales
- Monthly sales trend
- Most popular roast type
- Best-selling package size

---

9. Business Recommendations

Show that you can think like an analyst.

Examples:

- Increase inventory for top-selling coffee products.
- Run promotions during slower sales months.
- Focus marketing efforts on high-performing regions.
- Reward loyal customers with targeted offers.

10. Skills Demonstrated

- Data Cleaning
- Data Analysis
- Dashboard Design
- Data Visualization
- Business Analysis
- Excel Reporting
- Problem Solving

---

11. Files to Include

Your project folder could look like this:

```
Coffee-Sales-Dashboard/
│
├── Coffee Sales Dashboard.xlsx
├── Dashboard Screenshot.png
├── README.md
└── Project Presentation.mp4 (optional)
```

How to Present It During an Interview

Use this simple structure:

> **Problem:** The business needed a way to monitor coffee sales and identify top-performing products and customers.
>
> **Approach:** I cleaned the data, created Pivot Tables and Pivot Charts, added Slicers for interactivity, and designed an Excel dashboard.
>
> **Results:** The dashboard provides insights into sales trends, customer performance, country-wise revenue, and product performance, helping support data-driven business decisions.

Portfolio Tips

- Keep the project description to **one page**.
- Use screenshots instead of only describing the dashboard.
- Explain the business value, not just the Excel features.
- If possible, add a **2–4 minute video walkthrough** explaining the project and your findings.
- Upload the project to **GitHub** and link it from your resume and LinkedIn profile.

A portfolio that clearly explains the **business problem → analysis process → dashboard → insights → recommendations** will make a much stronger impression than simply sharing the Excel file.

video presentation is recommended or not

Yes, I recommend including a video presentation for an entry-level Data Analyst portfolio—but make it **optional, short, and professional**.

Why a video helps

A 2–4 minute video lets recruiters see that you can:

- Explain a business problem clearly.
- Walk through your dashboard confidently.
- Communicate insights, not just create charts.
- Present findings like a data analyst would in a meeting.

These are valuable skills for data analyst roles.

When a video is worth including

A video is especially useful if:

- Your project is an interactive Excel dashboard.
- You don't have professional work experience yet.
- You want to stand out from other entry-level candidates.

Keep the video short

Aim for **2–4 minutes**.

A good structure is:

- **0:00–0:20** – Introduce yourself and the project.
- **0:20–0:50** – Explain the business problem.
- **0:50–2:30** – Demonstrate the dashboard and filters.
- **2:30–3:30** – Share the key insights.
- **3:30–4:00** – Give business recommendations and conclude.

Tips for recording

- Record your screen in full HD (1080p) if possible.
- Speak clearly and at a steady pace.
- Zoom in if text is small.
- Avoid background noise.
- Don't read a script word for word—use it as a guide and speak naturally.

Where to include it

Upload the video to a platform like YouTube (unlisted) or Google Drive, then add the link to:

- Your GitHub project README
- Your LinkedIn project section
- Your resume (optional)

Recommendation for your portfolio

Since your project is an **Excel Coffee Sales Dashboard**, I recommend including:

- ✅ The Excel workbook
- ✅ Dashboard screenshots
- ✅ A detailed README explaining the project
- ✅ A **2–4 minute video walkthrough**

This combination gives recruiters a complete picture of both your technical and communication skills, which can make your portfolio more compelling for entry-level Data Analyst positions.

simple explantion about project 2-3 minues with script

Here's a **simple, natural 2–3 minute script** that you can use for your portfolio video. It is written for an **entry-level Data Analyst** and focuses on business understanding rather than just Excel features.

Coffee Sales Dashboard Project Presentation (2–3 Minutes)

Hello everyone.

My name is **[Your Name]**, and this is my **Coffee Sales Dashboard project**, which I created using **Microsoft Excel**.

The main objective of this project was to analyze coffee sales data and build an interactive dashboard that helps understand sales performance and supports better business decisions.

The dataset contains information such as **order dates, customers, countries, coffee types, roast types, package sizes, quantities, and sales amounts**.

First, I cleaned and organized the data to ensure it was ready for analysis. Then, I created **Pivot Tables** to summarize the data and used **Pivot Charts** to visualize the results. Finally, I added **Slicers** so users can filter the dashboard and explore the data interactively.

Now, let's look at the dashboard.

The dashboard provides an overview of coffee sales performance. It shows **sales trends over time**, allowing us to identify months with higher or lower sales. It also highlights the **top-selling coffee products**, helping the business understand which products customers prefer.

Another section shows **sales by country**, which helps identify the strongest markets. The dashboard also displays **top customers**, making it easier to recognize loyal customers and opportunities for targeted marketing.

One of the main advantages of this dashboard is that users can quickly filter the data using slicers to analyze different coffee types, roast types, or time periods without changing the underlying data.

From this analysis, the business can identify its best-performing products, understand customer buying patterns, monitor sales trends, and make better decisions about inventory, marketing, and future sales strategies.

This project helped me strengthen my skills in **Excel, data cleaning, Pivot Tables, Pivot Charts, dashboard design, data visualization, and business analysis**.

Thank you for watching my presentation. I hope you enjoyed learning about my Coffee Sales Dashboard project.

Presentation Tips

- 🎤 Speak slowly and confidently.
- 🖥️ While speaking, show each part of your dashboard instead of reading from the script.
- 😊 Smile and maintain a conversational tone.
- ⏱️ This script takes about **2–3 minutes** at a normal speaking pace.

This script is appropriate for a **GitHub portfolio, LinkedIn project showcase, or entry-level Data Analyst interview**.

coffeeOrdersProject.xlsx
Spreadsheet

project explanation 2-4 minutues for an entry level data analyst forr port folio

Yes. For an **entry-level Data Analyst portfolio**, recruiters want to understand **how you built the dashboard from raw data**. A step-by-step walkthrough is much stronger than just showing the final dashboard.

A **3½–4 minute** video is perfect.

📽️ Coffee Sales Dashboard Portfolio Video Script (Step by Step)

⏱️ 0:00–0:20 | Introduction

Show

- Open the Excel workbook.
- Show the Dashboard sheet first.

Script

> Hello everyone.

My name is **[Your Name]**, and today I'd like to present my **Coffee Sales Dashboard** project created using Microsoft Excel.

This project demonstrates how I analyzed raw sales data and converted it into an interactive dashboard to support business decision-making.

⏱️ 0:20–0:45 | Business Problem

Show

Dashboard

Script

The business wanted a simple way to monitor coffee sales performance.

Instead of reviewing thousands of rows of data, managers needed a dashboard to answer questions such as:

- **How are sales changing over time?**
- **Which countries generate the most revenue?**
- **Who are the top customers?**
- **Which coffee products perform the best?**

My goal was to build an interactive dashboard that answers these questions quickly.

⏱️ 0:45–1:15 | Dataset

Show

Orders sheet

Scroll slowly.

Script

This is the dataset I used for this project.

It contains information such as:

- **Order Date**

- **Customer ID**
- **Customer Name**
- **Country**
- **Coffee Type**
- **Roast Type**
- **Package Size**
- **Quantity**
- **Unit Price**
- **Total Sales**

This dataset provides all the information needed to analyze sales performance and customer purchasing behavior.

⏱️ 1:15–1:50 | Data Cleaning

Show

Orders sheet

Highlight different columns.

Script

Before starting the analysis, I cleaned and prepared the data.

I checked for missing values and duplicate records.

I ensured that dates, numbers, and currency values were formatted correctly.

I also verified that all records were consistent before creating the dashboard.

Data cleaning is an important step because accurate analysis depends on clean and reliable data.

⏱️ 1:50–2:20 | Formulas

Show

Customer sheet

Products sheet

Show one or two formulas.

Script

After cleaning the data, I used Excel formulas to enrich the dataset.

I used **XLOOKUP** to retrieve customer details and product information from separate tables.

This allowed me to combine data from multiple worksheets into one complete dataset for analysis.

Using lookup functions also reduces manual work and improves accuracy.

(If you also used INDEX-MATCH instead of XLOOKUP, mention that instead.)

⏱️ 2:20–2:45 | Pivot Tables

Show

Pivot Table sheet

Script

Next, I created Pivot Tables to summarize the sales data.

Pivot Tables helped me calculate total sales, analyze sales by country, identify the top customers, and summarize product performance.

They also made it easy to prepare the data for visualization.

⏱️ 2:45–3:00 | Pivot Charts

Show

Pivot Charts

Script

I then converted the Pivot Tables into Pivot Charts to make the analysis easier to understand.

Visual charts help users identify trends and compare performance much faster than looking at raw numbers.

⏱️ 3:00–3:40 | Dashboard

Show

Dashboard

Sales Trend

Move mouse.

This line chart shows how sales change over time.

It helps identify trends and periods of high or low sales.

Country Analysis

Move mouse.

This chart compares sales across different countries.

It allows managers to identify the strongest markets.

Top Customers

Move mouse.

This section highlights the top five customers based on total sales.

These insights can help the business build stronger relationships with valuable customers.

Timeline

Click Timeline.

Script

I also added a Timeline filter, allowing users to analyze sales for a specific year or month.

This makes it easy to identify seasonal sales patterns.

Slicers

Click slicers.

Script

Finally, I added Slicers so users can filter the dashboard by different categories.

As you can see, all charts update instantly, making the dashboard interactive and easy to explore.

⏱️ 3:40–4:10 | Business Insights

Show

Entire Dashboard

Script

From this dashboard, the business can quickly identify:

- **Overall sales performance**
- **Top-performing coffee products**
- **Highest-revenue countries**

- **Most valuable customers**
- **Sales trends over time**

These insights help support inventory planning, marketing decisions, and customer relationship management.

⏱️ 4:10–4:30 | Skills & Conclusion

Show

Dashboard

Script

Through this project, I strengthened my skills in Microsoft Excel, data cleaning, lookup functions, Pivot Tables, Pivot Charts, dashboard design, and business analysis.

More importantly, I learned how to transform raw data into meaningful insights that support business decisions.

Thank you for watching my presentation. I hope this project demonstrates my technical skills and my readiness for an entry-level Data Analyst role.

🎬 Recording Guide

Time	What to Show	What to Say
0:00–0:20	Dashboard	Introduction
0:20–0:45	Dashboard	Business Problem
0:45–1:15	Orders Sheet	Dataset
1:15–1:50	Orders Sheet	Data Cleaning
1:50–2:20	Customer & Products Sheets	XLOOKUP / Formulas
2:20–2:45	Pivot Tables	Data Summarization

Time	What to Show	What to Say
2:45–3:00	Pivot Charts	Visualization
3:00–3:40	Dashboard	Explain every chart
3:40–4:10	Dashboard	Business Insights
4:10–4:30	Dashboard	Skills & Conclusion

⭐ Recruiter Tip

As you present, don't just say **"I used XLOOKUP"** or **"I created Pivot Tables."** Instead, explain **why** you used them. For example:

- **XLOOKUP:** "I used XLOOKUP to combine customer and product information into the sales dataset, reducing manual work and improving accuracy."
- **Pivot Tables:** "I used Pivot Tables to summarize thousands of sales records into meaningful business metrics."
- **Timeline:** "The Timeline allows users to analyze sales performance across different time periods."
- **Slicers:** "Slicers make the dashboard interactive, allowing users to filter data instantly and explore insights from different perspectives."

Explaining the purpose behind each step shows analytical thinking, which is exactly what hiring managers look for in an entry-level Data Analyst.

i wannt little shortly

A **2.5–3 minute** video is perfect for an entry-level Data Analyst portfolio. Here's a shorter, professional script.

Coffee Sales Dashboard Portfolio Video Script (2.5–3 Mi...

Coffee Sales Dashboard Portfolio Video Script (2.5–3 Minutes)

⏱️ 0:00–0:15 | Introduction

Hello everyone.

My name is **[Your Name]**, and this is my **Coffee Sales Dashboard** project created using Microsoft Excel. The objective of this project was to analyze coffee sales data and build an interactive dashboard that helps businesses make data-driven decisions.

⏱️ 0:15–0:35 | Business Problem

The business wanted to understand sales performance by answering questions like:

- How are sales changing over time?
- Which countries generate the most sales?
- Who are the top customers?
- Which coffee products perform the best?

To answer these questions, I created an interactive dashboard.

⏱️ 0:35–1:00 | Dataset & Data Preparation

This dataset contains information such as order date, customer details, country, coffee type, roast type, quantity, and sales.

First, I cleaned and organized the data, then used **XLOOKUP** to combine customer and product information from different sheets.

⏱️ 1:00–1:20 | Analysis

Next, I created **Pivot Tables** to summarize the data and **Pivot Charts** to visualize sales trends, country performance, and top customers.

I also added **Slicers** and a **Timeline** so users can filter the dashboard interactively.

⏱️ 1:20–2:30 | Dashboard Walkthrough

Now, let's look at the dashboard.

The **Sales Trend** chart shows how sales change over time.

The **Country Analysis** chart compares sales across different countries.

The **Top 5 Customers** section highlights customers who generated the highest revenue.

Using the **Slicers** and **Timeline**, users can filter the dashboard instantly to analyze specific data without changing the original dataset.

⏱️ 2:30–3:00 | Conclusion

This dashboard helps businesses monitor sales performance, identify top customers, compare country-wise sales, and make better business decisions.

Through this project, I improved my skills in **Excel, XLOOKUP, Pivot Tables, Pivot Charts, dashboard design, and data visualization**.

Thank you for watching my presentation.

🎥 What to show

- **0:00–0:15:** Dashboard
- **0:15–0:35:** Dashboard (Business Problem)
- **0:35–1:00:** Orders sheet and briefly show the XLOOKUP formula.
- **1:00–1:20:** Pivot Tables and Pivot Charts.
- **1:20–2:30:** Dashboard (Sales Trend, Country Analysis, Top Customers, Slicers, Timeline).
- **2:30–3:00:** Full dashboard while concluding.

This is an ideal length for a portfolio video because it is concise, professional, and demonstrates both your Excel skills and your ability to explain business insights.

what show with script also

Yes. For a **portfolio video**, you should show your screen while you speak. Here is a **simple 3-minute script** with exactly **what to show** at each step.

📽️ Coffee Sales Dashboard Portfolio Video (3 Minutes)

⏱️ 0:00–0:15 | Introduction

🖥️ Show

- Open the **Dashboard** sheet.
- Show the complete dashboard.

🎤 Script

Hello everyone. My name is **[Your Name]**, and this is my Coffee Sales Dashboard project created using Microsoft Excel. In this project, I analyzed coffee sales data and built an interactive dashboard to help businesses monitor sales performance and make better decisions.

⏱️ 0:15–0:35 | Business Problem

🖥️ Show

- Keep the dashboard on screen.

🎤 Script

The business wanted to understand sales performance by answering questions like: Which products sell the most? Which countries generate the highest sales? Who are the top customers? And how do sales change over time? This dashboard answers these questions in a simple and interactive way.

⏱️ 0:35–0:55 | Dataset

🖥️ Show

- Open the **Orders** sheet.
- Scroll down slowly.

🎤 Script

This is the dataset used for the project. It contains information such as order date, customer name, country, coffee type, roast type, quantity, and sales. This data is the foundation for the dashboard.

⏱️ 0:55–1:15 | Formulas

🖥️ Show

- Open the **Orders** sheet.
- Click a cell with an **XLOOKUP** formula.

🎤 Script

To prepare the data, I used **XLOOKUP** to retrieve customer and product information from different worksheets. This helped combine the data into one complete dataset and reduced manual work.

⏱️ 1:15–1:35 | Pivot Tables

🖥️ Show

- Open the **Total Sales** or **Pivot Table** sheet.

🎤 Script

Next, I created Pivot Tables to summarize the data. They helped me calculate total sales, analyze country performance, and identify the top customers before creating the dashboard.

⏱️ 1:35–2:40 | Dashboard Walkthrough

🖥️ Show

Return to the **Dashboard**.

Move your mouse to each chart.

🎤 Script

This line chart shows the sales trend over time, helping identify changes in sales performance.

This chart compares sales across different countries, making it easy to identify the strongest markets.

This section displays the top five customers based on total sales, helping the business recognize its most valuable customers.

🖥️ Show

Click the **Timeline**.

🎤 Script

I also added a Timeline so users can filter the dashboard by different time periods and analyze sales more effectively.

🖥️ Show

Click the **Slicers**.

🎤 Script

The Slicers allow users to filter the dashboard instantly. All charts update automatically, making the dashboard interactive and easy to use.

⏱️ 2:40–3:00 | Conclusion

🖥️ Show

- Keep the full dashboard visible.

🎤 Script

This project helped me improve my skills in Excel, XLOOKUP, Pivot Tables, Pivot Charts, dashboard design, and data visualization. More importantly, it demonstrates my ability to transform raw data into meaningful business insights. Thank you for watching my presentation.

🎬 Simple Recording Plan

Time	Show on Screen	Speak About
0:00–0:15	Dashboard	Introduction
0:15–0:35	Dashboard	Business Problem
0:35–0:55	Orders Sheet	Dataset
0:55–1:15	XLOOKUP Formula	Formula Used
1:15–1:35	Pivot Tables	Data Analysis
1:35–2:40	Dashboard	Explain each chart, Timeline, and Slicers
2:40–3:00	Dashboard	Conclusion

⭐ Tip

Since you've uploaded the actual Excel project, I can create a **script that matches your dashboard exactly** (using your real chart titles, filters, Timeline, and Slicers) instead of this general version. That will look much more professional in your portfolio video.

ChatGPT can make mistakes. Check important info.
